EFFLUENT EXPORT PIPELINE PROJECT

IVGID's wastewater collection, treatment, and effluent export system serves the communities of Incline Village/Crystal Bay and the Nevada State Parks located at Lake Tahoe. A critical component of this operation is the 20.5-mile effluent export pipeline, now over 50 years old, which has reached the end of its useful life. This project to replace the pipeline represents an extraordinary infrastructure investment for a small utility district. The project is estimated to take four years to complete. Construction work began May 7, 2023 and pipe is now in the ground, with construction activities continuing. See www.yourtahoeplace.com/news/june2023-effluentpipeline-update for more project details.

Smart watering reduces runoff and produces healthy plants. You can maintain a beautiful and healthy yard without wasting water or money. Homeowners can save water and save money by making sure irrigation systems are properly maintained. Your landscape will typically require one inch of water a week, including rainfall, and that can vary depending on where you live, recent weather, and the plants in your landscape. Avoid watering in the middle of the day when the hot sun will evaporate much of the water before it can get to thirsty plants. IVGID Public Works' water conservation information is posted at <http://www.yourtahoeplace.com/public-works/water/water-conservation/outdoors>
